Recruitment Team  
Pensions Regulator

Dear Sir / Madam,

I am writing to you regarding **the Data Engineer Position in Brighton**. I am very much interested in applying for the position of Data Engineer because the job description given in the advertisement perfectly fits to the role I worked in my past companies and my interests are into Civil services in which I feel Pensions Regulator will be a platform for starting my career into civil services.

I have been working for **KBR** from past 1 year. The main project I am involved in is migration activity for **department of work and pensions**, in which I was involved in development and maintenance of KPI (Key Performance Indicators) and SPI (Service Performance Indicators). During this project I have full hands-on experience working on TSQL Development, Administration and building pipelines using SSIS and Azure Data Factory.

During my career experience, I worked on multiple roles related to SQL server development and administration on On-premises and Azure environments. I have working experience on the below.

- TSQL Development and administration
- ETL: SQL server Integration Services, Qlik Replicate, Azure Data Factory, Talend
- Reporting Services: Power BI, SSRS, Tableau
- Environments: On premises and Azure

During my Master studies in Engineering at Staffordshire University in UK, and BTech (Honours) I have gained extensive knowledge into database, electronics and electrical engineering.

From my previous years of experience into the field of data and my educational background with a pro-active, can-do attitude I am confident that my skills and qualifications make me a suitable candidate for the position of Data Engineer at your esteemed organisation.

I look forward for your valuable feedback.

Thank you for your time and consideration.

**Yours faithfully,**

**Sai Datla**
